EDUCATION

B.E in Artificial Intelligence and machine learning, SPPU University
CGPA:7.62/10

Dec 2021 - Aug 2025

TECHNICAL SKILLS

Programming	C++, Java, Python, JavaScript, SQL, HTML5
Backend	CI/CD,REST APIs, Azure SQL, Redis,
Frameworks/tools	Devops,Flask,Node.js, React, React.js., Docker, Git, Selenium
Specialized Knowledge	Distributed Systems, Relational Databases, Machine Learning Pipelines

EXPERIENCE

Software Development Engineer Intern
Tasks Labs

Nov 2025 - April 2026
Bengaluru, India

- Built REST APIs using Node.js and SQL to load app data faster, which fixed common errors and cut system crashes by 15%.
- Tested new software features and APIs using Selenium and Git, finding bugs before they reached the final release.
- Used Redis caching to save data temporarily, making backend responses much quicker for users.

AIML Intern
Internpe

Jul 2025 - Oct 2025
Remote

- Built machine learning models using Python, Pandas, and scikit-learn for classification and prediction tasks.
- Used Flask framework to build simple API connections for running large language models in AI projects.
- Created reusable machine learning pipelines for data cleaning and model training, reducing repeated manual work by 20%.

PROJECTS

Project Management System

Live GitHub

Built a team work platform using **Next.js, FastAPI, PostgreSQL, and React.js**. The app has **Kanban boards** for organizing tasks and real-time chat for team talking. During testing, teams finished project planning **35% faster** and needed **80% less time** writing meeting notes.

Safety.NET

Live GitHub

Built a safety app using **FastAPI and React.js** that shows crime rates in your area. It uses **location tracking** to help people find safe routes to go. reducing emergency navigation time by **40% during testing..**

ACHIEVEMENT

- **National Project Competition Finalist:** Built an **advanced workflow automation platform** using **React, REST APIs, databases, and backend development**, recognized for its technical implementation and project innovation.
- Finished three big AI and cloud courses called **"AWS Course CLI Certificate"** , **"Datascience,DL&NLP"**, and **"Machine Learning Bootcamp"** studying for over 140 hours. I used Python , AI models, and AWS terminal commands to build smart projects, which cut my data work time by 40% and made my predictions over 60% accurate.
